

# INVITATION FOR COLLABORATION

## Digital Security and privacy for citizens and Small and Medium Enterprises and Micro Enterprises (SU-DS03-2019-2020)

### Company Overview

ODI pioneers, develops, and markets advanced Content Disarm and Reconstruct (CDR) solutions for proactive cybersecurity in enterprises of all sizes. ODI's technology (ODIX) prevents malware infiltration of organizational networks by removing all malicious code from a wide range of file types. The ODIX process is done on the fly and does not affect business continuity. Uniquely, ODIX protects files from known and unknown future attacks – where legacy solutions fall short.

### SMB Digital Security Challenges

Most large corporate networks invest resources and implement malware prevention tools and technologies. However, even though 95% of all companies are SMEs, most do not have the knowledge and means to efficiently protect themselves against cyberattacks. This leaves SME networks vulnerable to potentially devastating damages. ODI is looking to join a consortium and contribute its enterprise grade proven technology to be accessible and affordable to any user (citizens, SMBs and micro enterprises). Our files sanitization technology can provide huge benefit for users offering 360° endpoint protection from file-based malware.

### Fast Facts

- Privately owned company, founded in 2014.
- Founders: Dr. Oren Eytan (ret. Col.) formerly Head of the Information Security Unit of the IDF and Mr. David Geva (ret. Col.) formerly Head of the IDF C4I and Cyber Academy.
